DRAWING YOUR FLOOR PLAN

We want to design your project accurately from the beginning. You can help us by providing a floor plan. Using the grid page 6, indicate your floor plan and record the following dimensions and the location of doors, windows and appliances.

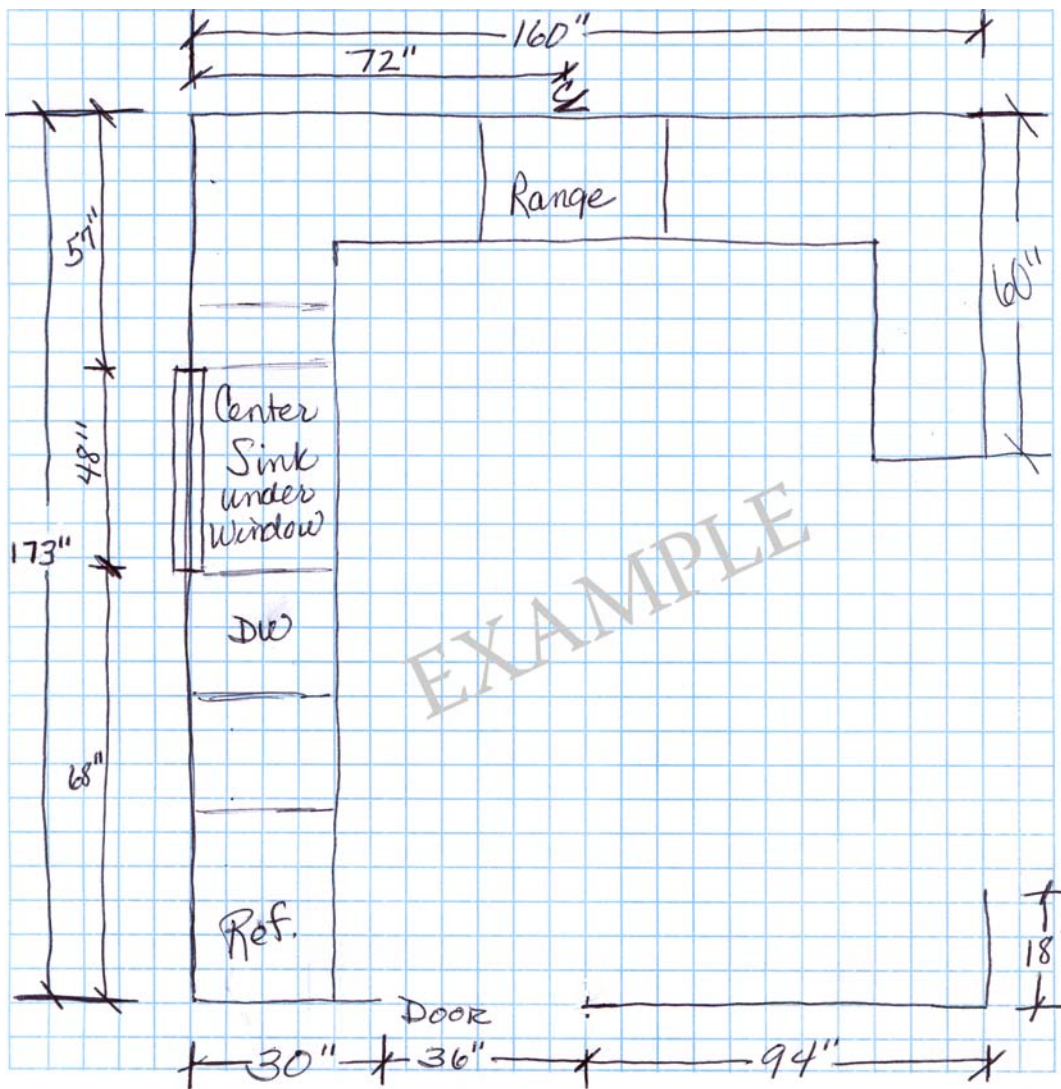

FLOOR PLAN INFORMATION

- Begin by roughly drawing the shape of your room on a plain sheet of paper or a copy of the grid on page 6. Add doors, windows, breaks in the wall and all obstructions. Indicate in which direction doors swing and where they lead. Note utility connections, ducts, outlets, lighting fixtures vents and radiators. Record all details in inches on your rough drawing. (see example below)

- Start in one corner of the room, select a wall, and measure the distance in inches, of every item on that wall from the corner. Write all measurements on your sketch. (see example below)
- Continue to measure all around the room until everything is located, measured and marked on your sketch.
- Indicate the overall length of walls, height of the walls and the distance of everything from the floor—like outlets, light switches, ledges and soffits. For new construction, remember to take into consideration sheetrock thickness.
- Check that you correctly measured your room by adding your measurements for each wall and comparing them to the opposite wall.
- Include dimensions of islands or peninsulas.

TRANSFER YOUR INFORMATION

- Using the grid on page 6, transfer the information from your sketch. Use the example below as a guide as to what dimensions are necessary to complete your design. Cross check your layout with your measured sketch.

FLOOR PLAN

So that your sketch is legible after faxing, please use this specially designed floor plan grid instead of other grid paper; and use ink; pencil marks don't fax well.
